Description

The wide bottom frame is designed for the JUMBO Facade Scaffold and creates a passage at the bottom of the scaffold, allowing for passage underneath, such as on a sidewalk. This is particularly useful in urban areas or other spaces where space is limited and unobstructed access beneath the scaffold is necessary. The frame is made of sturdy material with a thickness of 4 mm, ensuring long-lasting durability and stability. The wide bottom frame is an essential element in maintaining both safety and functionality in your scaffold setup.
