Description

This 2 metre bottom frame is designed to form the lowest section of the JUMBO Flex Facade Scaffold. The frame is essential for providing a solid and stable base for the scaffold, making it ideal for both small and large tasks. The JUMBO Flex Facade Scaffold is known for its versatility and easy assembly, and the bottom frame is no exception. Made with fully welded frames in tube dimensions Ø50x2mm and impact-resistant claws on diagonals and handrails, this frame ensures both strength and stability. It is crafted from aluminium alloy 6005 T6, offering high strength and low weight. If a passage under the scaffold is required, it is recommended to use the sidewalk frame instead.
