Description

JUMBO Universal Scaffolds is a powerful and versatile scaffolding. The scaffolding is especially useful for tasks where there is a high load, as the scaffolding, depending on the construction and platform type, can be loaded all the way up to scaffolding class 5 (450kg / m2). Can be used for carpentry work, masonry, etc.

Ledgers are crucial in Universal Scaffolding, when using plywood decks and aluminium ladders. They are designed to fit precisely in the dimensions, ensuring a stable and secure construction. The use of these ledgers is necessary to achieve correct installation and to ensure that the scaffold can withstand the loads encountered during work. Ledgers contribute to both safety and efficiency on the construction site and are specifically designed to work seamlessly with plywood decks and aluminium ladders.
