Description

This horizontal brace is a key component of the JUMBO Combiflex scaffolding system. It is used for horizontal bracing, expansion, and platform laying, ensuring stability and safety during construction. JUMBO Combiflex is renowned for its robustness, combining high strength with low weight, made from hot-dip galvanised high-quality steel. The scaffolding is highly flexible and can be assembled at any angle, 360 degrees around, with up to 8 components at each node. The diagonal bracing is integrated into the guardrail, making assembly and disassembly quick and efficient.
