Description

This Combiflex bracket with a horn is designed to extend the platform width on the JUMBO Combiflex scaffolding system while allowing for handrail installation for added safety. The bracket provides additional workspace, making it ideal for larger construction projects where flexibility and safety are crucial. JUMBO Combiflex is an exceptionally robust façade scaffolding system made from hot-dip galvanised high-quality steel, ensuring a combination of high strength and low weight. The scaffolding can be constructed at any angle, 360 degrees around, and can support up to 8 components at each node. The integrated diagonal bracing in the guardrail allows for quick and efficient assembly and disassembly.
