Description

This bracket is designed to extend the platform width on the JUMBO Flex Facade Scaffold. The bracket comes without horns, meaning that a railing cannot be installed on this part. It is ideal for tasks where additional workspace is needed on the scaffold, but a railing is not required. The JUMBO Flex Facade Scaffold is known for its versatility and easy assembly. The bracket is made with fully welded frames in tube dimensions Ø50x2mm and impact-resistant claws, ensuring a strong and stable construction. Made from aluminium alloy 6005 T6, the bracket combines high strength with low weight, making it easy to handle and durable in use.
