Description

The railing frame for JUMBO Combiflex is an efficient solution that allows for the installation of a complete railing with just one product. This frame also functions as a guardrail and features integrated diagonal bracing, contributing to increased stability and safety on the scaffold. JUMBO Combiflex is known for its high strength and low weight, made from hot-dip galvanised high-quality steel. This robust façade scaffolding can be constructed at any angle, 360 degrees around, and supports up to 8 components at each node, making it highly flexible and easy to work with. The integrated diagonal bracing in the guardrail makes assembly and disassembly quick and efficient.
