Description

The Combiflex Beam for JUMBO Combiflex is a robust component designed to handle extra high loads, making it ideal for demanding construction projects. This beam is used for horizontal bracing, expansion, and platform laying, ensuring maximum stability and safety. JUMBO Combiflex is an exceptionally durable façade scaffolding system, known for its combination of high strength and low weight, made from hot-dip galvanised high-quality steel. The scaffolding can be constructed at any angle, 360 degrees around, and can accommodate up to 8 components at each node. The integrated diagonal bracing in the guardrail contributes to quick and efficient assembly and disassembly.
