## Description

This bracket is designed to extend the platform width of the JUMBO Flex Facade Scaffold. It is an ideal choice when you need extra workspace on the scaffold. The bracket is made without horns, meaning that a railing cannot be installed on this part. The JUMBO Flex Facade Scaffold is known for its versatility and easy assembly and disassembly. The scaffold is constructed with fully welded frames in tube dimensions  $\text{Ø}50 \times 2\text{mm}$  and impact-resistant claws on the diagonals and handrails, ensuring a strong and stable structure. Made from aluminium alloy 6005 T6, the bracket combines high strength with low weight, making it both robust and easy to handle.
