Description

The tubes for JUMBO Combiflex are essential for building and extending the scaffolding vertically. These tubes are equipped with cup joints that make it easy to mount horizontal braces and other components, ensuring a strong and stable structure. JUMBO Combiflex is renowned for its impressive strength combined with low weight, thanks to the hot-dip galvanised high-quality steel construction. The scaffolding can be assembled at any angle, 360 degrees around, with the capability to add up to 8 components at each node. The integrated diagonal bracing ensures that assembly and disassembly can be carried out quickly and efficiently.
