Description

The handrail post is designed for the JUMBO Superflex facade scaffold and is used to create an end guardrail where passage on the platform is required. This component is essential for ensuring that the platform remains safe while providing an access route where needed. The JUMBO Superflex facade scaffold is renowned for its versatility, with easy and quick assembly and disassembly. The scaffold is constructed with fully welded frames in tube dimensions $\text{Ø}50 \times 4 \text{ mm}$, which, along with the impact-resistant claws on diagonals and handrails, ensures a strong and stable structure. Made from aluminium alloy 6005 T6, the handrail post combines high strength with low weight, making it both robust and easy to handle during scaffold assembly.
