Description

The reinforcing frame is used for setting up and stabilizing trusses in various constructions, such as canopies. This product is designed to prevent the trusses from toppling over by acting as a vertical diagonal brace. At the same time, the reinforcing frame ensures that the distance between the trusses remains constant, contributing to a robust and stable structure.

Technical Specifications:

Material: Aluminium

Dimensions: Ø48x4 mm

Center-to-center distance: 3000 mm

The reinforcing frame is made of aluminium, ensuring high durability and resistance to corrosion, making it ideal for outdoor use. With dimensions of Ø48x4 mm and a center-to-center distance of 3000 mm, this product is suitable for a wide range of construction projects where precision and reliability are crucial.
