Description

The Pro Fire Escape Ladder is a secure and efficient solution for building evacuation in the event of a fire. The ladder is mounted vertically on the exterior wall and is designed to be used from large windows, balconies, and similar exit points. When folded, the ladder is discreet and takes up minimal space, making it ideal for buildings where aesthetics and space optimisation are important. Upon pulling the release pin, located at the exit point, the ladder automatically unfolds and is ready for use. Additional ladder units above can be released separately from an upper floor, making the ladder flexible and functional in critical situations.
