Description

The 1 metre guardrail frame is designed to create an end guardrail on the JUMBO Superflex facade scaffold. This versatile scaffolding system is renowned for its flexibility and ease of use, with quick assembly and disassembly. The frame is made from fully welded aluminium with a tube dimension of Ø50x4mm, ensuring a strong and stable construction. The impact-resistant, fully welded claws on the diagonals and handrails add to its robustness. The material, aluminium alloy 6005 T6, combines high strength with low weight, making the guardrail frame easy to handle without compromising on safety.
