Description

The support for JUMBO Flex Facade Scaffold is an essential component that ensures the stability and safety of installed brackets. This support must always be used when installing external brackets to prevent unintended strain and ensure that the scaffold remains stable during use. The JUMBO Flex Facade Scaffold is known for its versatility and ease of assembly, with fully welded frames in tube dimensions Ø50x2mm and impact-resistant claws on diagonals and handrails contributing to a strong and stable scaffold. Made from aluminium alloy 6005 T6, the support combines high strength with low weight, making it easy to handle and reliable in use.
