Description

The Pro Flex Facade Scaffold is renowned for having the lightest frames on the market, making it the ideal choice for professionals seeking a combination of strength and light weight. The scaffold is made from aluminium alloy 6005 T6, ensuring high durability and low weight, with tube dimensions of Ø 50 x 2 mm and fully welded frames providing extra stability.

This flexible system offers many options for customization and expansion, making it easy to adjust the scaffold for various tasks. Horizontal braces and diagonals are equipped with impact-resistant, fully welded claws, enhancing the scaffold's robustness and safety.

The JUMBO Scaffolding Platform, supplied with the scaffold, consists of waterproof, non-slip Finnish plywood in pure birch wood, mounted in strong aluminium side-pieces. The platforms are designed with staggered hooks, allowing lengthwise extension without displacement. On the underside of the platform is a patented storm lock, securing the deck and fitting all types of scaffolding.

This set does not include a railing, providing the option to further customize the scaffold to meet specific needs.
