Description

The JUMBO platform (aluminium / plywood) with hatch is designed to meet the needs for safety and functionality on scaffolding. The platform is made from waterproof and non-slip Finnish plywood in pure birch, ensuring durability and a secure working area. It is mounted in sturdy aluminium rails, providing additional stability and long-lasting performance.

The offset hooks on the platform allow for scaffold extension without causing misalignment, ensuring a smooth and secure working surface even when the scaffold is extended. A patented storm lock is fitted on the underside of the platform, making it easy to secure the platform to all types of scaffolding, further enhancing safety during use.
