Description

The JUMBO platform (aluminium / plywood) with hatch is designed to meet the needs for safety and functionality on scaffolding. The platform is made from waterproof and non-slip Finnish plywood in pure birch, ensuring durability and a secure working area. It is mounted in sturdy aluminium rails, providing additional stability and long-lasting performance.

The offset hooks on the platform allow for scaffold extension without causing misalignment, ensuring a smooth and secure working surface even when the scaffold is extended. A patented storm lock is fitted on the underside of the platform, making it easy to secure the platform to all types of scaffolding, further enhancing safety during use.

Detail Images

Waterproof, non-slip, platform in Finnish plywood. Pure birch wood, mounted in strong aluminum profiles

Non-slip platforms equipped with staggered hooks, which makes lengthwise extention without displacement possible

Placed at each end under the platform, the patented storm locks are used to secure the platform to the scaffold

The set consists of
